

A screenshot of the Holidaze website. The top navigation bar is dark with the word 'Holidaze' in orange on the left and 'Hotels' 'Contact us' 'Admin' 'Log out' in white on the right. The main image is a night photograph of the colorful wooden buildings of Bryggen in Bergen, Norway, reflected in the water. Overlaid on the image is a search bar with the placeholder 'e.g. Hotel Bergen' and a magnifying glass icon.

1. Summary

I think the project represents what was asked in the requirements. Holidaze website is clean and very easy to navigate and use. It loads really quickly and very user friendly.

The screenshot shows a website for "Holidaze". The top navigation bar includes links for "Hotels", "Contact us", "Admin", and "Log out". The main section is titled "Hotels" and features a sub-section "Check out our hotels around Bergen". A large image of a swimming pool area is displayed. To the right of the image, the listing for "Hotel Summer Pool" is shown, which has a 4-star rating and a price of \$ 200,-. A "Read more" button is visible at the bottom of the listing.

2. Body

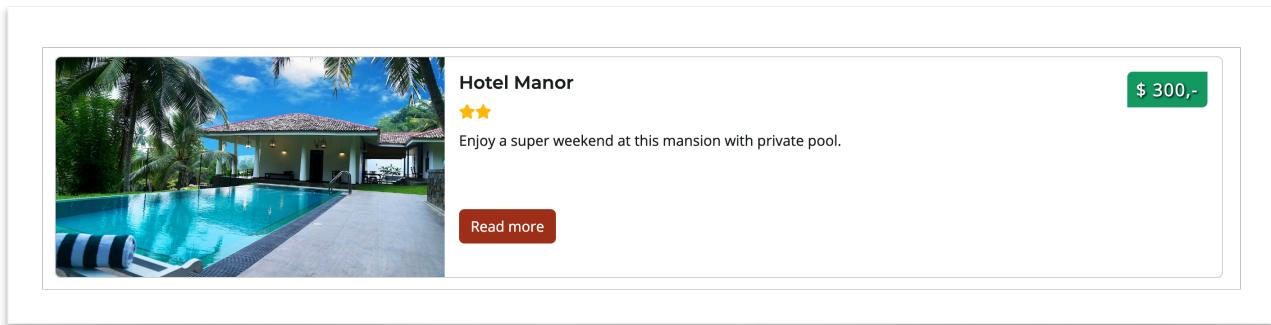

2.1. Home page

I builded the entire site of the Holidaze based on my Style Guide designed early in the process.

- **Homepage** I added the nice image from Bergen as a hero and search box where a customer can search for hotels and click direct to the site details.
- **Featured section** is represented with some hotels that are marked as featured in the database.
- **Contact us** form also is included at the bottom of the site using HTML5 validation to send Holidaze a message. (**Not really works**)

2.2. Hotels and Hotel Stars

- **Hotels page** is displayed all hotels in the database with some information as details and hotel stars.
- **Hotel stars** is a ranking based on reviews leaved on the website by the customers and applied to each Hotel. I just take the an average of the total reviews ranking.

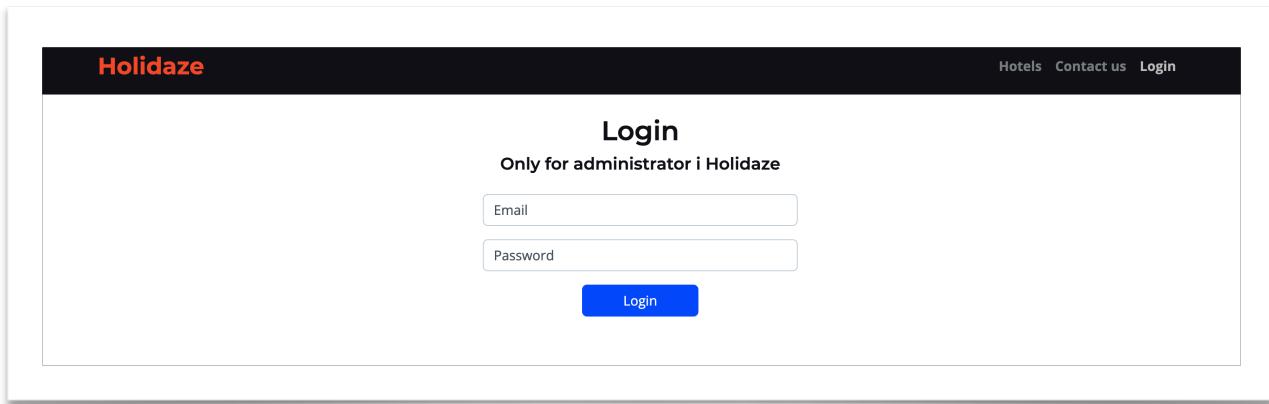

2.3. Contact us

Contact us form also is included at the bottom of the site using HTML5 validation to send Holidaze a message. (**Not really works**)

2.4. Login page

Login section is designed for only administrators where they can have access to create, edit or delete Hotel from the website.

Verification and information about the admin users are stored in Strapi deployed and hosted at Heroku.

2.5. Admin page

In the admin section, administrators users can do the following:

- **Hotels:** every hotel on the website can be created, edited or removed in this section (see image under). Using know icons, easy user interface and modals makes it very easy to use.

The image shows two parts of the Holidaze admin interface. On the left, there is a list of hotels with columns for Image, Id, Title, Price, and Featured status. Each row includes a small image thumbnail, an ID number, the hotel name, its price, a checked checkbox for featured status, and two small blue and red edit/delete icons. A green button at the top right of this list says "+ Add a hotel". On the right, a modal window titled "Edit hotel" is open, allowing users to modify details for a specific hotel. It includes fields for Title (Hotel Summer Pool), Price (200), Featured status (checked), Image (with options "Velg fil" and "Ingen fil valgt"), and Description (Enjoy some nice sommer days at our private pool with your family or as a couple). At the bottom of the modal are "Close" and "Save changes" buttons.

- **Reviews:** every review left by the users on the website will show up here. At this moment will be possible only to delete them.

The screenshot shows a 'Reviews' section on a website. On the right, a modal window titled 'Delete message' is open, asking 'Are you sure you want to delete message by Karen Listsa?'. It has 'Close' and 'Delete' buttons. The main table lists reviews from various authors with their ratings and trash icons for deletion.

Hotel	Author	Rating	Action
Hotel Summer Pool	Karen Listsa	3	
Hotel Summer Pool	Ola Nordman	5	
Hotel Summer Pool	Nor Kar	3	
Hotel Alpine Snow	Mister Ola	5	
Canada Hotel	Roberts da Villa	1	
Hotel Alpine Snow	Aesjj man	1	
Hotel Manor	Rica Ness	2	
Hotel Mountain	Alex Fish	4	

2.6. Details page

In this page users can see informations about the hotel, price and reviews.

- **Reviews** can be written and applied to hotels in this section. Users click in the button «+ Add a review» and fill up the modal form as the image under.

The screenshot shows a 'Reviews' section with a heading 'What our customers are saying.' Below it are three review cards. A modal window titled 'Add a review' is open, prompting for 'Author', 'Rating (1 - 5)', and 'Message'. It includes 'Close' and 'Save changes' buttons.

Reviews
What our customers are saying.

I will be staying here again with my family
Karen Listsa

5. Code Review

My boss at my current work (Senior utvikler) looked at my code and reviewed some parts of the website.

I had some problems figuring out how to use react-router deployed in localhost and hosted at online server and he helped with that.

He also was impressed how well the files were organized and some what easy to find.

Overall he was ok with my programming skills.

6. Conclusion

In term of functionality I think the Holidaze website works as should be and meets the requirements for this exam.

I liked this time around to work with Strapi, Heroku and Cloudinary. It is not so easy to set up but when the works is very good.

I am overall happy finishing this project and almost ending a 4 years journey with a lot of experience and apprentice.

Good, good!
